

LEADING CLIMATE ADAPTATION

Climate adaptation starts with leadership.

As of 2025, organisations across Australia are under growing pressure to demonstrate sustainability, with challenges including restricted market access, rising insurance premiums, and reduced access to credit and finance.

Join us in Launceston on 3 July 2025 for a hands-on workshop exploring your role in sustainability, carbon emissions management, and climate-related risk certification.

About the workshop

This workshop, led by Dr. Tomas Remenyi and Steve Willing, equips leaders with the knowledge and tools to drive meaningful sustainability initiatives within their organisations through interactive discussions and real-world applications. Together, they form a powerhouse duo, blending cutting-edge science with transformative leadership.

Tomas, a climate scientist, will explore Tasmania-specific climate projections, examining how environmental changes impact business operations. He will outline key corporate climate risks, including market access limitations, rising insurance premiums, and financial pressures related to sustainability and emissions reporting.

Steve, an expert in leadership and change processes, will guide participants in overcoming barriers to action, identifying spheres of influence, and implementing adaptive strategies.

Throughout the day, participants will identify the United Nations Sustainable Development Goals (UNSDGs) most relevant to their organisations and develop practical strategies to make meaningful progress.

“ I had an absolute light-bulb moment ... which was the intersection of what I love doing, what I'm good at and what the world needs ... so I've gone away feeling that I've actually worked out what I can do – and that's been magical.”

- workshop participant

Who should attend?

This workshop is ideal for:

- Business owners, executives, and board directors seeking to understand climate realities and implement effective sustainability strategies.
- Professionals whose roles are impacted by climate change, looking to build resilience and drive adaptive solutions.
- Leaders responsible for embedding sustainability into organisational operations and long-term planning.
- Emerging leaders eager to explore climate projections and their implications for decision-making.
- Anyone committed to tackling climate challenges and fostering a more sustainable future for their organisation and community.

Investment – \$920

Price includes attendance at this workshop, panel and networking event, with all catering provided, plus a follow up webinar. Concession rates are available for financial members of Tasmanian Leaders and for group bookings of three or more participants.

4.00 pm – 6.00 pm

Reflection and application webinar

Thursday 31 July
12.00 pm – 1.00 pm

Note: registration for the workshop includes the panel, networking event and webinar.

Meet your facilitators

Dr Tomas Remenyi is a climate services expert who translates complex climate science into practical tools and advice. A systems thinker with a unique blend of science and commerce expertise, Tomas works with stakeholders to address barriers to change and support strategic decision-making for future challenges. His passion extends far beyond climate science – Tomas is a dedicated community advocate, deeply invested in helping organisations and individuals build resilience and drive meaningful change in the face of uncertainty.

Steve Willing is an experienced facilitator and certified executive coach. With thirty years of experience, he specialises in leadership, organisational development and climate adaptation across industries, including government, emergency services, and private sectors, bringing a rich background in agriculture and outdoor leadership. Known for his ability to create an inclusive learning environment, Steve inspires others to embrace change with confidence and clarity.

Tom provided a clear, evidence-based understanding of climate change impacts in Tasmania and beyond – an absolute eye-opener. His insights, grounded in current science and modelling, made complex information accessible and relevant. I left with new knowledge, a sense of urgency, and a clear call to action to prepare our businesses, communities, and environments for the future.”

- Cath Ralston, Founder Katkin
